

## TREATMENT OF VASOACTIVE MEDICATION VIA PIV ACCESS EXTRAVASATION

| 1 | ► The vasoactive medication via PIV infusion is stopped immediately  |
|---|--|
| 2 | Residual medication is aspirated through the PIV access, and the catheter is removed   |
| 3 | The extent of the extravasation is outlined to provide a basleine for monitoring   |
| 4 | Two vials, each containing 5mg of Phentolamine, are reconstituted with 5mL of Normal Saline per vial to yield a final concentration of 1mg/mL  |
| 5 | The Phentolamine solution is injected to 0.5 to 1mL aliquots in 5 separate injections around the leading edge of the extravasation, using separate 25-gauge needles for each injection |
| 6 | <ul> <li>Nitroglycerin past (2.5cm) is applied to the area of extravasation</li> </ul>   |
| 7 | A medication occurrence report is filled out for review by the quality committee   |
