

Trends in Venous Thromboembolism Anticoagulation in Patients Hospitalized with COVID-19

1,351 patients hospitalized with COVID at 30 hospitals participating in Mi-COVID19 joint CQI effort from 3/7/20-6/17/20

Outcomes

Over time, % of hospitalized patients w/ COVID-19 who:

Missed ≥ 2 days of prophylaxis
DECREASED 

Received treatment dose anticoagulation without imaging
INCREASED 

Pharmacologic VTE prophylaxis should be standard of care for patients hospitalized with COVID-19
